Dear Hiring Manager,

Ever since I coded my first "Hello, World!" program, I instantly fell in love with the world of programming and knew it was what I wanted to do in life. My passion for learning new skills and honing them burned so bright that I taught myself the various tools, languages, and intricacies of full-stack web development, so I would be very excited to learn any new skills that I would need on the job.

Over the year of building web development projects, I've become quite proficient in JavaScript. My most ambitious project was Agora, a philosophy-themed social media app built using the MERN stack. The fact that both the frontend and backend of the project had to be written in JavaScript meant that I could hone my JavaScript skills!

Thank you for your time and consideration. I look forward to learning more about this position and your vision for this role.

Sincerely,
Saurav Sah
